

UT Chews

Urinary tract support in a great-tasting, chewable tablet

UT Chews are a powerful blend of whole fruit cranberry extract and D-mannose, designed to promote a healthy environment in the urinary tract and support the health of the urinary lining (its protective barrier). * Presented in great-tasting, chewable, orange-flavored tablets, UT Chews do not contain artificial sweeteners or colorings.

Cranberry (*Vaccinium macrocarpon*)

Cranberry is one of the most widely studied, time-tested, natural remedies for supporting urinary tract health. Unlike many commercially available cranberry products, which are made from sugar-rich juice or only contain individual, isolated phytochemicals, the cranberry extract in UT Chews is made from the whole fruit—juice, skins, flesh, and seeds—and therefore contains the full complement of phytochemicals and health-supporting constituents shown to promote optimal urinary tract function.

D-Mannose

Mannose is a type of natural sugar found in fruits and vegetables such as cranberries, apples, grapes, currants, and blueberries. Its naturally occurring form, called D-mannose, is similar in structure to certain receptors in the urinary tract, and thus, functions in a way which helps maintain a healthy environment in the urinary tract.* Although mannose is a sugar, it is eliminated from the body instead of impacting calorie intake or metabolism, and does not interfere with blood sugar regulation.

May help support:

- Optimal urinary tract health
- A healthy microbial environment in the urinary tract

Recommended Use:

Chew two tablets per day, or as directed by your health care practitioner.
