

NattokinaseMax

Cardiovascular Health

NattokinaseMax is a powerful enzyme used to support normal blood flow, circulation, and blood pressure levels. Derived from a highly purified extract of the traditional Japanese food natto, NattokinaseMax is a natural, highly active enzyme that helps promote normal levels of fibrin. Fibrin is a filamentous protein formed in blood, which can accumulate along blood vessel walls and affect blood flow. Research has shown NattokinaseMax closely resembles plasmin, the only endogenous enzyme that directly dissolves fibrin. It is thought to increase the body's production of plasmin. NattokinaseMax has been shown to support activation of many of the body's 3,000 endogenous enzymes. In addition, while many of the agents involved in promoting healthy blood flow and coagulation either have limitations, and/or serious side effects, this formulation of NattokinaseMax has a potent support activity that lasts for an 8-12 hour period and is safe for long-term use. Each capsule of NattokinaseMax contains 100 mg of nattokinase.

Maintaining healthy blood circulation and balanced coagulation is a key part of supporting cardiovascular health. Fibrinolytic enzymes, such as plasmin, produced in the endothelial cells are responsible for ensuring proper blood flow. However, production of these enzymes decreases with age, which can result in increased fibrin levels. NattokinaseMax also inhibits a key enzyme resulting in arterial dilation to help maintain healthy blood pressure levels, and can generate tissue plasminogen activators helping to promote blood flow. Because it is a highly purified extract derived from soybeans, supplementing NattokinaseMax differs from consuming soybeans in that NattokinaseMax escapes the typical breakdown by digestive enzymes, and is absorbed and taken into the body directly from the small intestine to exert its effects in the plasma.

Recommended Use:

1 soft gel capsule two times per day or as recommended by your health care professional.

Highlights

- Supports Healthy Blood Flow and Circulation
- Supports Healthy Fibrin Levels
- Helps Maintain Healthy Blood Pressure
- Supports Overall Cardiovascular Health
